

EverMore GPS Receiver

User Protocol Manual

Issue D

EverMore Technology Inc.

MANUAL REVISION HISTORY

Revision	Date	Update Summary
Issue A	March 26 2003	Initial release
Issue B	May 8 2003	Add msg 0xB5
Issue C	August 20 2003	Detailed description on binary message body
Issue D	August 27 2003	Add input message 0x92

APPENDIX B DEFAULT VALUE	41

1. INTRODUCTION

This is a general manual for EverMore GPS receiver/Module protocol. It describes the details of the serial port commands through which the EverMore GPS receiver is controlled and monitored. The serial port commands allow users to set the receiver parameters, configure output message type, and retrieve status information. The baud rate and protocol of the host COM port must match the baud rate and protocol of the GPS receiver serial port for commands and data to be successfully transmitted and received. The default receiver protocol is 4800baud, 8 data bits, 1 stop bit, and none parity.

At present, the latest EverMore protocol contains two separate protocols that have been implemented in the GPS Firmware (versions V5.20 and later). The first part of protocol is the standard NMEA protocol (NMEA-0183), which allows the standard NMEA application to quickly pick up the standard message from EverMore GPS receivers without any change. The second part is EverMore Proprietary Binary Message. With the binary message, GPS users can setup the EverMore GPS receiver in the way they want. The following sections describe both protocols in detail.

2. NMEA Output Message Specification

The EverMore GPS supports NMEA-0183 output format as defined by the National Marine Electronics Association (<http://www.nmea.org>). The currently supported NMEA messages for GPS applications are:

Standard NMEA message:

GGA	Global Positioning System Fix Data
GLL	Geographic Position – Latitude / Longitude
GSA	GNSS DOP and Active Satellites
GSV	GNSS Satellites in View
RMC	Recommended Minimum Specific GNSS Data
VTG	Course Over Ground and Ground Speed

And a specific NMEA message used to provide advance information to users:

PEMT	EverMore Proprietary NMEA Message
-------------	-----------------------------------

2.1 NMEA Checksum Calculation

The optional NMEA checksum can be enabled or disabled when setting up the NMEA protocol. The checksum consists of a “*” and two hexadecimal digits derived by exclusive-OR of all the characters between, but not including, the “\$” and “*” characters.

2.2 Standard NMEA Messages

2.2.1 GGA – Global Positioning System Fix Data

Purpose

Output time, position and position-fix related data.

Format

\$GPGGA,hhmmss.sss,ddmm.mmmm,a,dddmm.mmmm,a,x,xx,xx.x,xxxxx.x,M,xx.x,M,xxx,xxx*CS

Example

\$GPGGA,083604.883,2446.5254,N,12100.1399,E,1,09,01.0,00155.7,M,16.3,M,,*6E

Output Rate

Programmable using EverMore Binary Message 0x8E and 0x8F.

Field	Name	Example	Unit	Description
1	Message ID	\$GPGGA		GGA protocol header
2	UTC Time	083604.883		hhmmss.sss hour, minute, sec & decimal sec 000000.000 ~ 235959.999 Leading zeros transmitted
3	Latitude	2446.5254		ddmm.mmmm degree, minute & decimal minute Leading zeros transmitted
4	N/S Hemisphere Indicator	N		a, N=north or S=south
5	Longitude	12100.1399		dddmm.mmmm degree, minute & decimal minute Leading zeros transmitted
6	E/W Hemisphere Indicator	E		a, E=east or W=west
7	GPS Position Fix Indicator	1		x 0 = no position fix or invalid 1 = valid fix, SPS mode 2 = valid fix, DGPS, SPS mode
8	# of Satellites Used	09		xx, 00 ~ 12, Leading zeros transmitted
9	HDOP	01.0		xx.x, Leading zeros transmitted
10	MSL Altitude	00155.7	Meter	xxxxx.x MSL altitude = WGS-84 ellipsoid height minus geoidal separation. Currently this field is WGS-84 ellipsoid height Leading zeros transmitted
11	Unit of Altitude	M	Meter	
12	Geoid Separation	16.3		geoid separation
13	Unit of Geoid Separation	M	Meter	
14	Age of Differential GPS Data		second	xxx Time in seconds since last RTCM SC-104 Type-1 or Type-9 update. Null when DGPS is not used
15	Differential Reference Station ID			xxxx, 0000 ~ 1023 Leading zeros transmitted Null when DGPS is not used
16	Checksum	*6E		

2.2.2 GLL – Geographic Position – Latitude / Longitude

Purpose

Output latitude and longitude of current position, time, and status.

Format

\$GPGLL,ddmm.mmmm,a,dddmm.mmmm,a,hhmmss.sss,x*CS

Example

\$GPGLL,2446.5311,N,12100.1377,E,110519.259,A*35

Output Rate

Programmable using EverMore Binary Message 0x8E and 0x8F.

Field	Name	Example	Unit	Description
1	Message ID	\$GPGLL		GLL protocol header
2	Latitude	2446.5311		ddmm.mmmm degree, minute & decimal minute Leading zeros transmitted
3	N/S Hemisphere Indicator	N		a N=north or S=south
4	Longitude	12100.1377		dddmm.mmmm degree, minute & decimal minute Leading zeros transmitted
5	E/W Hemisphere Indicator	E		a E=east or W=west
6	UTC Time	110519.259		hhmmss.sss hour, minute, sec & decimal sec 000000.000 ~ 235959.999 Leading zeros transmitted
7	Status	A		A=data valid V=data invalid
8	Checksum	*35		

2.2.3 GSA – GNSS DOP and Active Satellites

Purpose

Output operating mode, satellites used for navigation, and DOP values.

Format

\$GPGSA,x,x,xx,xx,xx,xx,xx,xx,xx,xx,xx,xx,xx,xx,x,xx.x,xx.x,xx.x*CS

Example

\$GPGSA,A,3,27,31,08,20,13,28,03,01,02,11,22,,01.3,00.8,01.0*0C

Output Rate

Programmable using EverMore Binary Message 0x8E and 0x8F.

Field	Name	Example	Unit	Description
1	Message ID	\$GPGSA		GSA protocol header
2	Manual or Automatic Mode	A		x A=automatic, allowed to switch 2D/3D automatically M=manual, forced to operate in 2D or 3D mode
3	Navigation Solution Mode	3		X 1=fix unavailable 2=2D 3=3D
4	ID Numbers of the Satellites Used In Solution	27,31,08,20,13,28,03,01,02,11,22		xx SV ID (*1) of the satellites used for navigation Null for unused channels. (*2) Leading zeros transmitted
5	PDOP	01.3		xx.x Leading zeros transmitted
6	HDOP	00.8		xx.x Leading zeros transmitted
7	VDOP	01.0		xx.x Leading zeros transmitted
8	Checksum	*0C		

* Note 1: (SV ID)

According to the new NMEA specification, the numbers 33-64 are reserved for SBAS (Satellite Based Augmentation System) satellites. The SBAS system includes WAAS, EGNOS, and MTSAT satellites. The SBAS system PRN numbers are 120-138. The offset from NMEA SBAS SV ID to SBAS PRN number is 87. For example, a SBAS PRN number of 120 minus 87 yields the SV ID of 33. The addition of 87 to the SV ID yields the SBAS PRN number. The relationship between a SBAS satellite that we will try to search and its PRN numbers is shown as below.

SBAS Satellite	PRN	SV ID
WAAS POR	134	47
WAAS AOR-W	122	35
EGNOS AOR-E	120	33
EGNOS IOR	131	44
MTSAT-1	129	42
MTSAT-2	137	50

2.2.4 GSV – GNSS Satellites in View

Purpose

Output number of SVs in view, PRN numbers, elevation, azimuth and SNR values. Four satellites maximum per transmission, additional satellite data sent in the second or the third sentence.

Format

\$GPGSV,x,x,xx,xx,xx,xxx,xx ... xx,xx,xxx,xx*CS

Example

\$GPGSV,3,1,11,27,59,276,44,31,50,046,44,08,38,309,44,20,07,165,39*70

\$GPGSV,3,2,11,13,10,223,41,28,13,304,38,03,14,054,41,01,13,186,40*73

\$GPGSV,3,3,11,02,06,303,43,11,73,165,43,22,06,113,35,,,,*48

Output Rate

Programmable using EverMore Binary Message 0x8E and 0x8F.

Field	Name	Example	Unit	Description
1	Message ID	\$GPGSV		GSV protocol header
2	Total Messages	3		x, 1 ~ 3
3	Message Number	1		x, 1 ~ 3
4	Total Number of Satellites In View	11		xx, 0 ~ 12 Leading zeros transmitted
5	Satellite Number #1	27		xx, SV1 ID number, 01 ~ 32 Leading zeros transmitted
6	Elevation Angle #1	59	degree	xx, 00 ~ 90 Leading zeros transmitted
7	Azimuth Angle #1	276	degree	xxx, 000 ~ 359 Leading zeros transmitted
8	C/No #1	44	dB/Hz	xx, C/No 00 ~ 99 Leading zeros transmitted
9	Satellite Number #2	31		SV2 ID number, 01 ~ 32
10	Elevation Angle #2	50	degree	00 ~ 90
11	Azimuth Angle #2	046	degree	000 ~ 359
12	C/No #2	44	dB/Hz	C/No 00 ~ 99
13	Satellite Number #3	08		SV3 ID number , 01 ~ 32
14	Elevation Angle #3	38	degree	00 ~ 90
15	Azimuth Angle #3	309	degree	000 ~ 359
16	C/No #3	44	dB/Hz	C/No 00 ~ 99
17	Satellite Number #4	20		SV3 ID number, 01 ~ 32
18	Elevation Angle #4	07	degree	00 ~ 90
19	Azimuth Angle #4	165	degree	000 ~ 359
20	C/No #4	39	dB/Hz	C/No 00 ~ 99
21	Checksum	*70		

Note:

The relationship between a SBAS satellite and its SV ID shown in this message is explained in section 4.1.4.

2.2.5 RMC – Recommended Minimum Specific GNSS Data

Purpose

Output time, date, position, course and speed data.

Format

\$GPRMC,hhmmss.sss,x,ddmm.mmmm,a,dddmm.mmmm,a,xxx.x,xxx.x,ddmmyy,xxx.x,a*CS

Example

\$GPRMC,083604.883,A,2446.5254,N,12100.1399,E,000.0,000.0,300502,003.3,W*76

Output Rate

Programmable using EverMore Binary Message 0x8E and 0x8F.

Field	Name	Example	Unit	Description
1	Message ID	\$GPRMC		RMC protocol header
2	UTC time	083604.883		hhmmss.sss hour, minute, sec & decimal sec 000000.000 ~ 235959.999 Leading zeros transmitted
3	Status	A		x A=Data valid V=Navigation receiver warning
4	Latitude	2446.5254		ddmm.mmmm degree, minute & decimal minute Leading zeros transmitted
5	N/S hemisphere indicator	N		a N=north or S=south
6	Longitude	12100.1399		dddmm.mmmm degree, minute & decimal minute Leading zeros transmitted
7	E/W hemisphere indicator	E		a E=east or W=west
8	Speed Over Ground	000.0	knot	xxx.x Leading zeros transmitted
9	Course Over Ground	000.0	degree	xxx.x Leading zeros transmitted
10	Date	300502		ddmmyy day, month, year (2 digit) Leading zeros transmitted
11	Magnetic variation	003.3	degree	00.0 to 359.9 degrees Leading zeros transmitted
12	Magnetic variation reference	W		a E=east or W=west Westerly variation adds to true course
13	Checksum	*76		

2.2.6 VTG – Course Over Ground and Ground Speed

Purpose

Outputs actual track made good and speed relative to the ground.

Format

\$GPVTG,xxx.x,T,xxx.x,M,xxx.x,N,xxxx.x,K*CS

Example

\$GPVTG,000.0,T,003.3,M,000.0,N,0000.0,K*7E

Output Rate

Programmable using EverMore Binary Message 0x8E and 0x8F.

Field	Name	Example	Unit	Description
1	Message ID	\$GPVTG		VTG protocol header
2	Heading	000.0	degree	xxx.x Heading of the receiver when moving Leading zeros transmitted
3	True	T		Indicates true heading
4	Heading	003.3	degree	Degrees magnetic Magnetic course over ground, 000 to 359 Degrees Leading zeros transmitted
5	M	M		Indicates magnetic heading
6	Speed	000.0	knots	xxx.x Speed in knots Leading zeros transmitted
7	N	N		Indicates speed in knots
8	Speed	0000.0	Km/hr	xxxx.x Speed in km/hr Leading zeros transmitted
9	K	K		Indicates speed in km/hr
10	Checksum	*7E		

2.3 EverMore Proprietary NMEA Output Messages

The EverMore proprietary NMEA output messages are used to provide receiver information beyond which is provided by the standard NMEA messages. Depending on the product, the message may appear at the beginning of the session.

2.3.1 PENT 100 – Receiver ID

Purpose

This message is output once automatically at startup after the receiver has completed initialization. Firmware version, release date, and various default parameters are output in the message.

Format

\$PENT,100,vv.vvV,ddmmyy,xxx,xx,x,xx,xx,xx,x,x,x,x*CS<CR><LF>

Example

\$PENT,100,05.03A,240701,082,15,1,08,06,04,0,0,2,1*7E

Output Rate

Once after power up initialization.

Field	Name	Example	Unit	Description
1	Message ID	100		Receiver ID Output
2	Firmware Version	05.03A		vv.vvV, Leading zeros transmitted
3	Firmware Release Date	240701		ddmmyy day, month, year (2 digits)
4	Default Datum ID	082		xxx 0 ~ 219, see Appendix – A Leading zeros transmitted
5	Default Elevation Mask	15	degree	xx, 0 ~ 90 Leading zeros transmitted
6	Default DOP Select	1		0:GDOP Mask, 1:Auto 2:PDOP Mask, 3:HDOP Mask 4: No DOP Mask
7	Default GDOP Mask	08		xx, 1 ~ 99 Leading zeros transmitted
8	Default PDOP Mask	06		xx, 1 ~ 99 Leading zeros transmitted
9	Default HDOP Mask	04		xx, 1 ~ 99 Leading zeros transmitted
10	Default Receiver Operating Mode	0		0 = Normal Mode 1 = Power Saving 2 = Normal Mode with 1PPS
11	Default Position Pinning Control	0		0 = disable 1 = enable
12	Altitude Hold Mode	2		0 = Disable 1 = Always 2 = Auto
13	2 / 1 Satellite Nav Mode	1		0 = disable 2/1 Sat Nav Mode 1 = direction hold only (2 Sat) 2 = clock hold only (2 Sat) 3 = direction hold then clock hold (1 Sat) 4 = clock hold then direction hold (1 Sat)
14	Checksum	*7E		

2.3.2 PEEMT 101 – Compact Navigation Solution

Purpose

Output PVT solution in a single compact message format to reduce message-processing overhead.

Format

```
$PEEMT,101,x,x,xx,xx,ddmmyyhmmss,ddmm.mmmm,a,dddmm.mmmm,a,xxxxx.x,xxx.x,xxxx.x
,
xxxxx*CS<CR><LF>
```

Example

```
$PEEMT,101,3,10,02.4,230701153638,2446.5243,N,12100.1494,E,00095,147,0115*2C
```

Output Rate

Programmable using EverMore Binary Message 0x8E and 0x8F.

Field	Name	Example	Unit	Description
1	Message ID	101		Compact Nav Solution Output
2	Navigation Solution Mode	3		1 = fix unavailable 2 = 2D fix (3 satellites) 3 = 3D fix (>= 4 satellites) 4 = 2D fix with differential aiding 5 = 3D fix with differential aiding 6 = 2 / 1 satellite degrade mode
3	# of Satellites Used For Pos Fix	10		xx Leading zeros transmitted
4	DOP	02.4		xx.x no fix : output 00.0 2D fix : output HDOP 3D fix : output PDOP Invalid during degrade mode Leading zeros transmitted
5	UTC Date and Time	230701 153638		ddmmyyhmmss, day, month, year (2 digits) hour, minute, second Leading zeros transmitted
6	Latitude	2446.5243	degree	ddmm.mmmm degree, minute & decimal minute Leading zeros transmitted
7	N / S Hemisphere Indicator	N		N = North, S = South
8	Longitude	12100.1494		dddmm.mmmm degree, minute & decimal minute Leading zeros transmitted
9	E / W Hemisphere Indicator	E		E = East, W = West
10	Altitude	00095	meter	xxxxx Leading zeros transmitted
11	Heading	147	degree	xxx Measured clockwise from North direction. Leading zeros transmitted.
12	Speed	0115	Km/hr	xxxx Leading zeros transmitted
13	Checksum	*2C		

2.3.3 PEMT 102 – User Task Status

Purpose

This message is primarily used for user code test. Default user code outputs once automatically at startup after the user task has completed initialization. Firmware version, release date, and various default parameters are output in the message.

Format

\$PEMT,102,vv.vvv,ddmmyy,cc.vvv,xxx,s.cc,vv*CS<CR><LF>

Example

\$PEMT,102,01.000,180902,01.201,000,0.00,000*0C

Output Rate

Once after power up initialization or subsequent tests.

Field	Name	Example	Unit	Description
1	Message ID	102		User Task Status ID
2	User Version	01.000		vv.vvv Leading zeros transmitted
3	User Code Release Date	180902		ddmmyy day, month, year (2 digits)
4	Compiler	01.201		cc.vvv Leading zeros transmitted
5	Special	000		xxx Special configuration code, e.g. special hardware 000: default, no special code Leading zeros transmitted
6	Status	0.00		s.cc User Task Status s 0: OK 1: FAIL cc: error code, 00-FF Leading zeros transmitted
7	Reserved	000		vvv 000: default, reserved Leading zeros transmitted

2.3.4 PENT 103 – Revision Information

Purpose

This message is primarily used to control the F/W revisions.

Format

\$PENT,103,ddmmyy, vvvvvvvvv,Ax,xxx*CS<CR><LF>

Example

\$PENT,103,220802,GR2U00529F,CM,000 *7F

Output Rate

Once after power-up or system-reset

Field	Name	Example	Unit	Description
1	Message ID	103		Message ID 103
2	Release Date	220802		ddmmyy day, month, year (all 2 digits) date when released
3	File Code	GR2U00540G		Vvvvvvvvv
4	Release Type	C1		Vx Cx: Customized version Sx: Standard version x: Application code
5	Reserved	000		xxx

3. Evermore Binary Message Specification

The EverMore binary message protocol consists of 3 parts: message header, message body, and message footer.

Message Header		Message Body	Message Footer	
Start Sequence	Length of Message Body		Message Checksum	End Sequence
0x10 0x02	1 or 2 bytes	Up to 253 bytes	1 or 2 bytes	0x10 0x03

Note: Supported binary messages are subject to the products and Firmware. Some of the firmware and products do not support all of the binary messages below.

Message Header

The Message Header consists of 3 or 4 bytes:

Byte #1 - DLE = 0x10

Byte #2 - STX = 0x02

Byte #3 - Length of Message Body + 2

Byte #4 - when Byte #3 equals DLE (0x10), DLE (0x10) is sent out as the 4th byte of the message header; otherwise it is not sent.

Message Body

When 0x10 is encountered in the message body, it is repeated at the time sending out, to distinguish from DLE(0x10). However, it is not necessary to repeat when calculating length or checksum of message body. The EverMore Binary Message supports following message types for receiver configuration and status monitoring:

Message Type 0x02: Navigation Data Output

Message Type 0x04: DOP Data Output

Message Type 0x06: Channel Status Output

Message Type 0x08: Measurement Data Output

Message Footer:

The Message Footer consists of 3 or 4 bytes:

Byte #1 - checksum of the Message Body (it is calculated by summing all bytes in the Message Body and taking the sum modulo 256)

Byte #2 - when Byte #1 equals DLE (0x10), DLE (0x10) is sent out as the 2nd byte of the message footer; otherwise it is not sent.

Byte #3 - DLE (0x10). If checksum is not 0x10, this DLE character becomes Byte #2

Byte #4 - ETX (0x03). If checksum is not 0x10, this ETX character becomes Byte #3

3.1 EverMore Input Messages

3.1.1 Input Message 0x81: Data Logging

See section 4.1

3.1.2 Input Message 0x84: Protocol Configuration

Purpose

This command allows users to set the output message protocol to NMEA or EverMore Binary. The particular NMEA message to output and its update rate may be configured using Binary Message 0x8E and 0x8F. When set to EverMore Binary protocol, Binary Message 0x02, 0x04, 0x06, 0x08 is output; with update rate configured using Binary Message 0x8F.

Format

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x84		Unsigned byte	
2	Message Protocol <i>0 = EverMore Binary</i> <i>1 = NMEA</i>	0 ~ 1	Unsigned byte	
3 ~ 4	Reserved			

3.1.3 Input Message 0x85: Restart

Purpose

This command allows restarting the receiver for a hot/warm/cold start. The following explain the information used by the different Restart Modes:

Default Mode: Power on sequence is executed, ignoring the position and time inputs.

Hot Start: The position and time inputs are used as initial estimate.

Cold Start: The position and time information are ignored.

Test Start: All the receiver-channel will acquire and track the same satellite specified in byte #3.

Format

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x85		Unsigned byte	
2	Restart Mode (decimal) <i>0 = default mode</i> <i>1 = hot start</i> <i>2 = warm start</i> <i>3 = cold start</i>		Unsigned byte	
3	Test Start Search PRN	1 ~ 32	Unsigned byte	
4	UTC Second	0 ~ 59	Unsigned byte	
5	UTC Minute	0 ~ 59	Unsigned byte	
6	UTC Hour	0 ~ 23	Unsigned byte	
7	UTC Day	1 ~ 31	Unsigned byte	
8	UTC Month	1 ~ 12	Unsigned byte	

9 ~ 10	UTC Year	1980 upward	Unsigned 16bit integer	
11 ~ 12	Latitude (WGS-84) <i>North Hemisphere > 0</i> <i>South Hemisphere < 0</i>	+/- 900	Signed 16bit integer	1/10 degree
13 ~ 14	Longitude (WGS-84) <i>East Hemisphere > 0</i> <i>West Hemisphere < 0</i>	+/- 1800	Signed 16bit integer	1/10 degree
15 ~16	Altitude (WGS-84)	-1000 ~ 18000	Signed 16bit integer	Meter

3.1.4 Input Message 0x86: Set Elevation Mask

Purpose

Set the elevation mask for position computation. Satellites with elevation angle less than the elevation mask angle will not be used for navigation solution.

Format

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x86		Unsigned byte	
2	Elevation Mask	0 ~ 89	Unsigned byte	degree
3 ~ 4	Reserved			

3.1.5 Input Message 0x87: Set DOP Mask

Purpose

Set various DOP masks, which are used to set accuracy limits on position output. If the selected DOP mask is exceeded, new position-velocity-time solution is not calculated and last valid solution is output instead.

When DOP Select (byte #2) is set to Auto, navigation solution is in 3D mode when PDOP value is less than the PDOP Mask, navigation solution changes to 2D mode when PDOP value is greater than the PDOP Mask and HDOP value is less than the HDOP Mask, position data is flagged invalid when HDOP value is greater than the HDOP Mask.

Format

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x87		Unsigned byte	
2	DOP Select <i>0 = GDOP mask</i> <i>1 = Auto</i> <i>2 = PDOP mask</i> <i>3 = HDOP mask</i> <i>4 = Don't use mask</i>	0 ~ 4	Unsigned byte	
3	GDOP	1 ~ 99	Unsigned byte	
4	PDOP	1 ~ 99	Unsigned byte	
5	HDOP	1 ~ 99	Unsigned byte	
6 ~ 8	Reserved			

3.1.6 Input Message 0x89: Serial Port Configuration

Purpose

This command allows setting of the serial port baud rate. When the port data validity bit is set to 0 (invalid), the baud rate setting for the corresponding serial port is ignored.

Format

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x89		Unsigned byte	
2	bit0 = main serial port data valid <i>1 : valid 0 : invalid</i> bit1 = DGPS port data valid* <i>1 : valid 0 : invalid</i>		Unsigned byte	
3	Main Serial Port Baud Rate <i>0 = 4800bps</i> <i>1 = 9600bps</i> <i>2 = 19200bps</i>	0 ~ 3	Unsigned byte	
4	DGPS Port Baud Rate* <i>0 = 4800bps</i> <i>1 = 9600bps</i> <i>2 = 19200bps</i>	0 ~ 3	Unsigned byte	

3.1.7 Input Message 0x8D: Select Datum

Purpose

This command allows users to change the datum used by the receiver from the default datum setting.

Format

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x8D		Unsigned byte	
2	Reserved			
3 ~ 4	Datum ID	See Appendix A	Signed 16bit integer	

3.1.8 Input Message 0x8E: NMEA Message Configuration

Purpose

Configure the update rate of the NMEA messages. With default navigation update rate of the receiver set to 1Hz, setting the particular NMEA message update rate to n instructs the receiver to output the message at 1/n-Hz. When the navigation update rate is changed to 1/m-Hz via EverMore Private Message 0x89, setting the particular NMEA message update rate to n instructs the receiver to output the message at 1/(m*n)-Hz.

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x8E		Unsigned byte	
2	bit0 = GGA data validity bit1 = GLL data validity bit2 = GSA data validity bit3 = GSV data validity bit4 = RMC data validity bit5 = VTG data validity bit6 = Message 101 data validity bit7 = Reserved <i>0 = data invalid</i> <i>1 = data valid</i>		Unsigned byte	
3	Check-Sum Control <i>0 = disable</i> <i>1 = enable</i>		Unsigned byte	
4	GGA Update Rate <i>0 = disable</i> <i>1 ~ 1/255 of Navigation Update Rate</i>	0 ~ 255	Unsigned byte	1/Hz
5	GLL Update Rate <i>0 = disable</i> <i>1 ~ 1/255 of Navigation Update Rate</i>	0 ~ 255	Unsigned byte	1/Hz
6	GSA Update Rate <i>0 = disable</i> <i>1 ~ 1/255 of Navigation Update Rate</i>	0 ~ 255	Unsigned byte	1/Hz
7	GSV Update Rate <i>0 = disable</i> <i>1 ~ 1/255 of Navigation Update Rate</i>	0 ~ 255	Unsigned byte	1/Hz
8	RMC Update Rate <i>0 = disable</i> <i>1 ~ 1/255 of Navigation Update Rate</i>	0 ~ 255	Unsigned byte	1/Hz
9	VTG Update Rate <i>0 = disable</i> <i>1 ~ 1/255 of Navigation Update Rate</i>	0 ~ 255	Unsigned byte	1/Hz
10	Message 101 Update Rate <i>0 = disable</i> <i>1 ~ 1/255 of Navigation Update Rate</i>	0 ~ 255	Unsigned byte	1/Hz
11 ~ 16	Reserved			

3.1.9 Input Message 0x8F: Operating Mode Configuration

Purpose

Sets the navigation update rate and receiver-operating mode. The receiver-operating mode can be set to one of the following:

1. Normal full power mode without 1PPS output synchronized.
2. Power saving mode without 1PPS out synchronized.
3. Normal full-power mode with 1PPS output synchronized.

With Navigation Update Rate set to n, measurement is taken and navigation solution is computed every n seconds. When power saving mode is selected, the RF/GPSBBP On Time field is also referenced.

Format

Byte #	Contents	Range	Size	Scale	Unit
1	Message ID = 0x8F		Unsigned byte		
2	Receiver Operating Mode <i>0 = Normal Mode</i> <i>1 = Power Saving</i> <i>2 = Normal Mode with 1PPS</i>	0 ~ 2 (*1)	Unsigned byte		
3	Navigation Update Rate	1 ~ 10 (*2)	Unsigned byte	1 /	Hz
4	RF/GPSBBP On Time <i>1=Power on 220ms</i> <i>2=Power on 280ms</i> <i>3=Power on 340ms</i> <i>4=Power on 400ms</i>	1 ~ 4	Unsigned byte		

Note 1: For GM-305 only: Instead of software control, the 1PPS function can be also enabled through hardware control. There are two I/O pins used for 1PPS function. PIN6 indicates 1PPS timing; PIN5 shows whether the 1PPS timing is valid. If hardware control is desired, PIN5 should be pulled high while POWER ON. Then 1PPS function will be enabled.

Note 2: In Power Saving mode, this value is limited to 1 Hz only.

3.1.10 Input Message 0x92: Position Pinning Configuration

Purpose

Enable or disable position pinning function.

Format

Byte #	Contents	Range	Size	Scale	Unit
1	Message ID = 0x92		Unsigned byte		
2	Position Pinning Control <i>0 = disable</i> <i>1 = enable</i>	0 ~ 1	Unsigned byte		
3~ 4	Reserved				

3.1.11 Input Message 0x94: Differential GPS Control

Purpose

This command allows users to control the receiver's differential GPS capability.

Format

Byte #	Contents	Range	Size	Scale	Unit
1	Message ID = 0x94		Unsigned byte		
2	Differential GPS Control <i>0 = disable</i> <i>1 = enable SBAS*</i> <i>2 = enable RTCM</i>	0 ~ 2	Unsigned byte		
3 ~ 4	RTCM DGPS Time Out		Unsigned 16bit integer		
5	Set the first SBAS satellite to be searched (SBAS id)	0~5	Unsigned byte		
6 ~ 8	Reserved				

* Some of the product do not support SBAS feature.

Note :

The relationship between the selected SBAS satellite and its PRN number is shown below.

SBAS id selected	SBAS
0	WAAS POR (134)
1	WAAS AOR-W(122)
2	EGNOS AOR-E(120)
3	EGNOS IOR (131)
4	MTSAT-1 (129)
5	MTSAT-2 (137)

3.1.12 Input Message 0x95: Reset Receiver to Default

Purpose

Resets all the receiver parameters to their default values.

Format

Byte #	Contents	Range	Size	Scale	Unit
1	Message ID = 0x95		Unsigned byte		
2	Reset Ephemeris control 0 : disable 1 : enable		Unsigned byte		
3 ~ 4	Reserved				

3.1.13 Input Message 0xB3: Query Revision Information

Purpose

This command instructs the receiver to provide Revision Information. The result is sent using message 0x40.

Format

Byte #	Contents	Range	Size	Scale	Unit
1	Message ID = 0xB3	-	Unsigned byte	-	-
2 ~ 4	Reserved	-	3 Unsigned bytes	-	-

3.1.14 Input Message 0xB5: Function On/Off Control

Purpose

Enable or disable particular function.

Format

Byte #	Contents	Range	Size	Scale	Unit
1	Message ID = 0xB5	-	Unsigned byte	-	-
2	0 = disable 1 = enable	0 ~ 1	Unsigned byte	-	-
3	Control item 0: Position Predict 1: Temperature Sensor	0 ~ 1	Unsigned byte	-	-
4	Reserved	-		-	-

3.2 EverMore Output Messages

3.2.1 Output Message 0x02: Navigation Data

Purpose

Outputs:

- 1 GPS time.
- 2 Receiver position and velocity in WGS-84 ECEF coordinate.
- 3 Number of visible satellites.
- 4 Number of satellites used in position-fix.
- 5 EverMore GPS firmware base version.

Format

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x02		Unsigned byte	
2 ~ 3	GPS week	0 ~ 65535	Unsigned 16bit integer	week
4 ~ 7	GPS tow	0 ~ 60479900	Unsigned 32bit integer	1/100 sec
8 ~ 11	Position X	+/- 2 ³¹	Signed 32bit integer	meter
12 ~ 15	Position Y	+/- 2 ³¹	Signed 32bit integer	meter
16 ~ 19	Position Z	+/- 2 ³¹	Signed 32bit integer	meter
20 ~ 21	Velocity X	+/- 2 ¹⁵	Signed 16bit integer	1/10 m/sec
22 ~ 23	Velocity Y	+/- 2 ¹⁵	Signed 16bit integer	1/10 m/sec
24 ~ 25	Velocity Z	+/- 2 ¹⁵	Signed 16bit integer	1/10 m/sec
26 (bit0 ~ 3)	# of SV used	0 ~ 12	Unsigned 4bit integer	
26 (bit4 ~ 7)	# of SV visible	0 ~ 12	Unsigned 4bit integer	
27 ~ 28	Firmware version	0 ~ 65535	Unsigned 16bit integer	1/100

3.2.2 Output Message 0x04: DOP Data

Purpose

Outputs:

- 1 GPS time.
- 2 GDOP, PDOP, HDOP, VDOP, and TDOP.
- 3 Receiver navigation mode.

Format

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x04		Unsigned byte	
2 ~ 3	GPS week	0 ~ 65535	Unsigned 16bit integer	week
4 ~ 7	GPS tow	0 ~ 60479900	Unsigned 32bit integer	1/100 sec
8	GDOP	0 ~ 255	Unsigned byte	0.1
9	PDOP	0 ~ 255	Unsigned byte	0.1
10	HDOP	0 ~ 255	Unsigned byte	0.1

11	VDOP	0 ~ 255	Unsigned byte	0.1
12	TDOP	0 ~ 255	Unsigned byte	0.1
13	Navigation Mode <i>0 = no position fix</i> <i>1 = 1D navigation</i> <i>2 = 2D navigation</i> <i>3 = 3D navigation</i> <i>4 = 3D navigation with DGPS</i>	0 ~ 4	Unsigned byte	

3.2.3 Output Message 0x06: Channel Status

Purpose

Outputs:

- 1 GPS time.
- 2 Number of satellites in view.
- 3 Satellite ID, elevation angle, azimuth angle, C/N estimate, and status of the correlator channels. This set of data is sent for each in-view satellites.

Format

Byte #	Contents	Range	Size	Scale	Unit
1	Message ID = 0x06		Unsigned byte		
2 ~ 3	GPS week	0 ~ 65535	Unsigned 16bit integer		week
4 ~ 7	GPS tow	0 ~ 60479900	Unsigned 32bit integer	1/100	sec
8	Number of SV in view	0 ~ 12	Unsigned byte		

Channel Data (7 bytes per channel). N=1,2,3,...n for the n visible satellites.

Byte #	Contents	Range	Size	Unit
7N+2	Channel	1 ~ 12	Unsigned byte	
7N+3	SV ID	1 ~ 32	Unsigned byte	
7N+4 ~7N+5	Azimuth	0 ~ 359	Unsigned byte	Degree
7N+6	Elevation	0 ~ 90	Unsigned byte	Degree
7N+7	C/N	0 ~ 99	Unsigned byte	dB/Hz
7N+8	Channel Status <i>bit0 = 1 satellite acquired</i> <i>bit1 = 1 code-tracking loop locked</i> <i>bit2 = 1 carrier-tracking loop locked</i> <i>bit3 = 1 data-bit synchronization done</i> <i>bit4 = 1 frame synchronization done</i> <i>bit5 = 1 ephemeris data collected</i> <i>bit6 = 1 used for position fix</i>			

Total length of message 0x06: 8 + 7 * Number Of Visible Satellites

Minimum length: 8 bytes (0 satellite visible)

Maximum length: 92 bytes (12 satellites visible)

3.2.4 Output Message 0x08: Measurement Data

Purpose

Outputs:

- 1 GPS time.
- 2 Clock offset.
- 3 Numbers of satellites in view.
- 4 Satellite ID, elevation angle, channel status, pseudo-range, delta-range, and satellite doppler frequency. This set of data is sent for each in-view satellites.

Format

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x08		Unsigned byte	
2 ~ 3	GPS week	0 ~ 65535	Unsigned 16bit integer	week
4 ~ 7	GPS tow	0 ~ 60479900	Unsigned 32bit integer	1/100 sec
8 ~ 9	Clock offset	0 ~ 65535	Unsigned 16bit integer	
10	Number of SV in view	0 ~ 12	Unsigned byte	

Channel Data (14 bytes per channel). Repeated for each in-view satellites.

Byte #	Contents	Range	Size	Unit
1 ~ 2	Channel SV Elevation	bit(0:3) 1 ~ 12 bit(4:8) 1 ~ 31 bit(9:15) 0 ~ 90	Unsigned byte Unsigned byte Unsigned byte	Degree
3	Channel Status <i>bit0 = 1 satellite acquired</i> <i>bit1 = 1 code-tracking loop locked</i> <i>bit2 = 1 carrier-tracking loop locked</i> <i>bit3 = 1 data-bit synchronization done</i> <i>bit4 = 1 frame-synchronization done</i> <i>bit5 = 1 ephemeris data collected</i> <i>bit6 = 1 used for position fix</i>			
4	Reserved			
5 ~ 8	Pseudo-Range	+/- 2 ³¹	Signed 32bit integer	Meter
9 ~ 12	Delta-Range	+/- 2 ³¹	Signed 32bit integer	Meter/sec
13 ~ 14	Doppler	0 ~ 65535	Unsigned 16bit integer	Hz

Total length of message 0x08: 10 + 14 * Number Of Visible Satellites

Minimum length: 8 bytes (0 satellite in view)

Maximum length: 178 bytes (12 satellites in view)

3.2.5 Output Message 0x40: Revision Information

Purpose

This message provides revision information once receiving a revision query command 0xB2.

Format

Byte #	Contents	Range	Size	Scale Unit
1	Message ID = 0x40		Unsigned byte	
2-5	Firmware Release Date		Unsigned 32bit integer	
6~15	File Code	See PEMT 103 File Code	10 Unsigned bytes	
16	Release Type	'C': Customized version 'S': Standard version	Unsigned byte	
17	Application Code		Unsigned byte	
18-19	Reserved	0~65535	Unsigned 16bit integer	

4. Data Logging

In applications where the GPS receiver reported position, velocity, and time needs to be logged, the EverMore GPS supports logging capability directly by storing the data in the on-board memory. The logged data may be retrieved later.

The logged information consists of:

- GPS time, with 1 second resolution.
- Position in ECEF coordinate, with 1 meter resolution.
- Velocity, with 1 meter/sec resolution.
- Navigation mode (2D, 3D).
- DGPS used indicator

All data logging commands and each logged data output is sent with message header, message body, and message footer protocol as described in section 4.2.

The EverMore GPS can log up to 9000 sets of data.

4.1 Data Logging Input Messages

4.1.1 LogConfig Set

Purpose

Configures data logging function. Upon reception of the command, the logging configuration information is returned using private message 0x20, described in section 4.3.2.2.

Format

Byte #	Contents	Range	Size	Unit
1	Message ID = 0x81		Unsigned byte	
2	Command	LogConfig = 0x10	Unsigned byte	
3 ~ 4	Configuration	1 = enable data logging 0 = disable data logging	Unsigned 16bit integer	
5 ~ 6	delta_Tmin	0 ~ 65535	Unsigned 16bit integer	sec
7 ~ 8	delta_Tmax	0 ~ 65535	Unsigned 16bit integer	sec
9 ~ 10	delta_D	0 ~ 65535	Unsigned 16bit integer	meter

The data logging function stores receiver position, velocity, time and status information according to the following algorithm:

delta_Tmin : Time interval to check if data logging is required; must be > 0.

delta_Tmax : Maximum time interval beyond which data must be logged.

delta_D : Maximum distance beyond which data must be logged.

distance = *current_position* – *last_logged_position*

elapsed_time = *current_time* – *last_logged_time*

if ((*elapsed_time* < (*delta_Tmin* - 1)) or (*delta_Tmin* == 0)) return and do not record PVT data

if (((*elapsed_time* > (*delta_Tmax* - 1)) and (*delta_Tmax* > 0))

 or ((*distance* > (*delta_D* - 1)) and (*delta_D* > 0))) record PVT data

4.1.2 LogData Dump

Purpose

Configures the receiver to output all the logged data in NMEA-0183 format or binary format. Data logging is disabled upon reception of this command. LogConfig Set command has to be re-issued to re-enable data logging. The logged data is sent using private message 0x22, described in section 4.3.2.1.

Format

Byte #	Contents	Range	Size	Scale
1	Message ID = 0x81		Unsigned byte	
2	Command	LogDump = 0x12	Unsigned byte	
3	Baud Rate	0 = 4800 bps 1 = 9600 bps 2 = 19200 bps 3 = 38400 bps		
4	Message Type	bit0 = GGA message on/off (0:OFF, 1:ON) bit1 = GLL message on/off bit2 = RMC message on/off bit3 = VTG message on/off bit4~6 = reserved bit7 = Log binary data on/off		

When bit7 of byte 4 is set, logged data is sent in binary format; otherwise it is sent in NMEA format. Bit0 ~ bit3 of byte 4 specifies which NMEA messages to be sent.

4.1.3 LogData Erase

Purpose

Commands the receiver to erase the logged data stored in the memory.

Format

Byte #	Contents	Range	Size	Scale
1	Message ID = 0x81		Unsigned byte	
2	Command	LogEarse = 0x11	Unsigned byte	

4.1.4 LogConfig Read

Purpose

Retrieves the data logging configuration, and the information on percentage of the data buffer used. The logging configuration information is returned using private message 0x20, described in section 4.3.2.2.

Format

Byte #	Contents	Range	Size	Scale
1	Message ID = 0x81		Unsigned byte	
2	Command	LogRead = 0x13	Unsigned byte	

4.2 Data Logging Output Messages

4.2.1 LogData

Purpose

When the **LogData Dump** command is sent to the receiver to retrieve the logged data in binary format, each logged record is send out according to the format listed below with header and footer described in section 4.2 added. The logged data is output consecutively until all data stored in the on-board memory is sent out.

Format

Byte #	Contents	Range	Size	Unit
1	Message ID = 0x22		Unsigned byte	
2 ~ 3	Velocity	mode[13] DGPS[12] velocity[9:0]	Unsigned 16bit integer	
4 ~ 7	GPS Time	GPS week [31: 20] GPS tow [19: 0]	Unsigned 16bit integer	
8 ~ 11	EFEC_X	+/- 2 ³¹	Signed 32bit integer	meter
12 ~ 15	EFEX_Y	+/- 2 ³¹	Signed 32bit integer	meter
16 ~ 19	EFEC_Z	+/- 2 ³¹	Signed 32bit integer	meter

mode : Navigation mode (0=2D, 1=3D)
 DGPS : 0 = no DGPS used, 1 = used DGPS correction
 velocity[9:0] : velocity in m/s, range 0 ~ 1023
 ECEF_X : ECEF coordinate X axis
 ECEF_Y : ECEF coordinate Y axis
 ECEF_Z : ECEF coordinate Z axis

4.2.2 LogConfig Info

Purpose

When **LogConfig Read** or **LogConfig Set** command is sent to the receiver, data logging configuration and percentage of the data buffer usage are returned.

Format

Byte #	Contents	Range	Size	Unit
1	Message ID = 0x20		Unsigned byte	
2 ~ 3	Buffer Used Percentage	0 ~ 10000	Unsigned 16bit integer	0.01%
4 ~ 5	Configuration	1 = <i>log data</i> 0 = <i>stop logging data</i>	Unsigned 16bit integer	
6 ~ 7	delta_Tmin	0 ~ 65535	Unsigned 16bit integer	Sec
8 ~ 9	delta_Tmax	0 ~ 65535	Unsigned 16bit integer	Sec
10 ~ 11	delta_D	0 ~ 65535	Unsigned 16bit integer	meter

4.3 Data Logging Programming Description

4.3.1 Configuring for Data Logging

1. Send **LogConfig Set** command to the receiver to enable data logging.
2. The receiver will start logging data and return the **LogConfig Info** message three times. The logged receiver position-velocity-time data is stored in a circular buffer. When the buffer becomes full, oldest data is over-written.
3. The **LogConfig Read** command may be issued to request sending of **LogConfig Info** message again three times.

4.3.2 Retrieving Logged Data

1. Issue **LogData Dump** command to the receiver.
2. Upon reception of the **LogData Dump** command, the receiver disables data logging automatically and starts to output the logged data either in NMEA format or in binary **LogData** message format, according to the format requested in the previously issued **LogData Dump** command, until all logged data is sent.
3. Another issue of the **LogData Dump** command to the receiver will cause step 2 to be performed again; the same set of data will be sent.
4. To continue data logging operation, send **LogConfig Set** command to the receiver again. Newly logged data will be placed right after the latest logged data in the circular buffer. If the **LogData Dump** command is issued and the data buffer is not used up yet, both the newly logged data and the previously logged data will be output. Note that **LogData Dump** command dumps everything in the data buffer.
5. To ensure only newly logged data is output after **LogConfig Set** command is issued, send **LogData Erase** command to clear the log buffer prior to sending the **LogConfig Set** command.

APPENDIX A Supported Datum List

DATUM DESCRIPTION TABLE

Datumn ID	Datumn	dX	dY	dZ	Ellipsoid	Region of Use
0	WGS-84	0	0	0	WGS 84	Global
1	WGS-84	0	0	0	WGS84	Global
2	Adindan	-118	-14	218	Clarke 1880	Burkina Faso

APPENDIX B Default Value

The product has the following factory preset default values:

Datum:	000 (WGS-84)
NMEA Enable Switch :	GGA ON
	GLL OFF
	GSA ON
	GSV ON
	RMC ON
	VTG OFF
	Checksum ON
EMT Private Message:	OFF
Baud Rate:	4800 Baud
Elevation Mask:	5 degrees
DOP Mask:	DOP Select: Auto
	GDOP: 20
	PDOP: 15
	HDOP: 8

Receiver Operating Mode: Normal Mode (without 1PPS)

Commands can be issued to the EverMore GPS to change the settings of the receiver. The new settings will remain effective on next power-on as long as the on-board rechargeable backup battery is not discharged. After the backup battery is discharged, factory preset default settings will be used.
